Shakti KC

Sydney, NSW, Australia ❖ shakti3462@gmail.com ❖ 0426063797 ❖ LinkedIn ❖ Github

Software Engineer with more than 7 years of experience building scalable web, mobile, and cloud applications using TypeScript, JavaScript and Python. My journey in tech has allowed me to work with diverse technologies, including Node.js, React, Next.js, FastAPI, NestJS, Django, AWS, and CI/CD pipelines. Currently, I am deepening my expertise in AI/ML, with hands-on experience delivering multiple AI-powered projects.

WORK EXPERIENCE

FuseMachines May 2023 – Present
Software Engineer level III ***New York, USA***

Software Engineer Level III (March 2025 to present)

- Led end-to-end development across multiple client/product streams, mentoring junior devs and lifting code review standards.
- Delivered AI-enabled features, including DB-Agent, MoodBoard Engine, and ROI Analyst using React, FastAPI and PostgreSQL
- Engineered end-to-end features across the stack using React, FastAPI and Node.js, including responsive UI, REST APIs and data pipelines within an AWS serverless, event-driven architecture.
- Supported containerized workloads using Docker/Kubernetes, assisting with deployments, debugging, and runtime configuration.

Software Engineer Level II (May 2023 to March 2025)

- Designed and implemented RESTful APIs using Node.js and Django, along with automated test suites, ensuring scalable backend performance and robust system reliability.
- Automated deployment workflows by improving GitLab CI/CD pipelines, reducing manual release steps and making deployments more reliable.
- Researched and implemented a Turborepo monorepo, centralising React UI/components and types; optimised CI for speed and resolved Webpack-related monorepo issues.

The YetiTech Dec 2021 – Apr 2023
Software Engineer *Kathmandu, Nepal*

- Demonstrating the ability to plan and deliver relevant results with accountability, in terms of entire project architecture using React, Django and Node.js, within timelines, and with full ownership and no guidance.
- Built and maintained backend services using Node.js and Django including RESTful APIs, authentication, database modeling, and performance-optimized business logic.

- Supported environment setup and deployments; helped maintain scripts and configs using Ansible and shell scripts.

MulyaMitra May 2019 – Dec 2021
Software Engineer *Kathmandu, Nepal*

- Designed and developed Progressive Web Apps (PWA) using React and Redux.
- Created and documented scalable REST APIs with Node.js and Express.js, and structured application data models using MongoDB.
- Learned a lot from a senior developer about writing clean, functional code.

SKILLS

Programming Languages: (Proficient) - JavaScript, TypeScript, Python
(Familiar) - Java, C#, C++
Frontend: React, NextJS, React Native, Chakra UI, BootStrap, Tailwind, Bootstrap, Redux Toolkit
Backend: Node.js, ExpressJS, NestJS, Django, FastAPI, GraphQL, REST APIs
Cloud & DevOps: AWS (Lambda, S3, Cognito, etc.), Serverless, CI/CD (GitHub, Fastlane), Kubernetes, Ansible
Databases: PostgreSQL, MySQL, SQLite, MongoDB, DynamoDB, Redis
Testing & Monitoring: Cypress, Jest, Appium, Percy, Sentry, Log Rocket, Amplitude
AI/Developer Tools: GitHub Copilot, OpenAI, Claude, Cursor
VR/AR Tech: (Familiar)Three.js, Unity, OpenXR, XR Interaction Toolkit
Machine learning/AI: PyTorch , Scikit-learn, TensorFlow, LangChain, AutoGen, RAG, LangGraph

PERSONAL PROJECTS

- **ClipSense AI -** https://github.com/Shaktikc/ClipSense-AI

  Tech Stack: FastAPI, LLMs (Mistral, GPT-4.1), FFmpeg
  The user can paste YouTube links and specify the required information. The AI will extract the relevant video segments, merge them, and present a concise video containing only the requested content.

- **Potree-Annotation (Full Stack) - Live URL**

  Tech Stack: React, AWS Lambda with Express.js, Serverless, Node.js, DynamoDB, serverless-offline, Potree (3D viewer), CSS Modules, Docker & Docker Compose
  3D point cloud annotation tool using Potree to load and visualize LAZ point cloud data. Users can interactively create, label (up to 256 bytes), and delete annotations by clicking directly on points in the 3D scene.

More projects in **https://github.com/Shaktikc?tab=repositories**

EDUCATION & VISA

Tribuvan University - Bachelor in Science (BSc) in Physics
Student (subclass 500) - Dependent Visa (full working rights)
